Priyanka Sahoo

QUALITY ENGINEER

Software Quality Assurance Engineer | Automation | API Testing | Python | Playwright | Selenium

PROFESSIONAL PROFILE

QA Engineer with 7+ years of software quality assurance experience across web applications, payment-processing systems, Salesforce platforms, and integrated business applications. Experienced in manual, functional, regression, API, database, UI automation, and end-to-end testing. Hands-on with Python, Pytest, Playwright, Selenium, Postman, SoapUI, SQL, GitHub, Jenkins, and GitHub Actions. Focused on building reliable automation, identifying risks early, validating data across application layers, and continuously improving the testing process.

CORE QA & TECHNICAL SKILLS

Automation: Playwright, Selenium WebDriver, Pytest, Page Object Model

Programming: Python, Java, SQL, C++, JSON, XML

API Testing: Postman, SoapUI, REST API validation, response/status validation

Testing: Functional, Regression, Smoke, End-to-End, Integration, UAT, Data Validation

CI/CD: GitHub Actions, Jenkins, automated test execution

Test & Defect Tools: Jira, HP Quality Center/ALM, IBM Rational Quality Manager

Platforms: Salesforce, online/mobile banking and payment-processing applications

Version Control: Git, GitHub

PROFESSIONAL QA EXPERIENCE – SELECTED HIGHLIGHTS

- Payment Processing: Tested transaction-management workflows including payments, refunds, settlement, invalid/expired cards, duplicate transactions, timeout/reversal scenarios, and external integrations.
- Automation: Developed and maintained Selenium/Java and Python/Pytest automation for repetitive functional and regression scenarios with large test-data sets.
- API & Data Validation: Tested SOAP/REST APIs using SoapUI and used SQL/database validation to verify end-to-end data flow.
- Salesforce QA: Performed functional, regression, UI automation, API testing, and data validation for Salesforce-based healthcare and insurance applications.
- Agile Delivery: Participated in test planning, estimation, execution, defect management, peer reviews, release validation, and collaboration with development and business teams.
- Quality Focus: Used risk-based thinking to identify important regression scenarios and validate business-critical workflows across UI, API, and database layers.

MAJOR PROFESSIONAL PROJECTS

Elavon – Payment Processing / Fusebox

Tested and automated critical online payment transaction workflows, including payments, refunds, settlements, and edge cases.

- Payment transaction management
- Functional, regression, API and UI testing
- Selenium/Pytest automation
- Payment scenarios such as refunds, invalid/expired cards, duplicate transactions and reversals
- SQL/data validation
- Defect identification and release validation

UHC – Salesforce Healthcare/Insurance

Tested online Salesforce-based healthcare and insurance workflows through UI, API, regression, and data validation.

- Salesforce-based billing/claims workflows
- Functional and regression testing
- Selenium/Pytest automation
- Postman API testing
- SQL/data validation
- End-to-end business workflow testing

Papa John's – HotSchedules / NextGenPOS Integration

Tested online integration and data flow between HotSchedules and NextGenPOS across application and database layers.

- Tested data flow between HotSchedules and NextGenPOS
- Validated data across application/database layers
- Functional and integration testing
- Verified ordering and labor-management workflows

FEATURED AUTOMATION PROJECTS

1. Python Playwright Automation

Built a Python-based Playwright automation project using Pytest to demonstrate modern browser automation and maintainable test design.

- Implemented browser automation and UI validation using Playwright with Python.
- Used Pytest fixtures and reusable test components to organize test execution.
- Applied locator strategies, assertions, and page-level automation practices.
- Configured test execution and troubleshooting for local development.
- Project repository: https://github.com/priyanka085/Playwright_Automation

2. GreenCart Python Selenium Automation

Created a Python/Selenium automation project for GreenCart with Pytest-based end-to-end testing and a CI workflow for critical smoke coverage.

- Implemented Selenium UI automation using Python and Pytest.
- Organized automation using reusable page-object/test components.

- Identified the critical end-to-end test as a smoke test using the @pytest.mark.smoke marker.
- Configured GitHub Actions to install dependencies and execute smoke tests automatically.
- Repository: https://github.com/priyanka085/pytest-automation

3. REST API Automation – Simple Books API

Developed Pytest-based API tests to practice automated validation of REST endpoints and JSON responses.

- Validated API availability and endpoint responses.
- Created API-client and order-related test scenarios.
- Validated HTTP status codes and response content.
- Used Pytest fixtures and a reusable API test structure.
- Practiced positive and negative API scenarios and test-data handling.
- Path: https://github.com/priyanka085/Playwright_Automation/tests/test_API_books.py

MY APPROACH TO QUALITY

- Understand requirements, acceptance criteria, business workflows, and potential risks.
- Design functional and negative test scenarios before identifying automation candidates.
- Prioritize critical user journeys for smoke and end-to-end coverage.
- Validate application behavior at multiple layers: UI, API, and database where applicable.
- Automate stable, repeatable regression scenarios while keeping tests maintainable.
- Integrate automated tests into CI/CD so quality checks can run consistently with code changes.
- Investigate failures, provide useful defect information, and collaborate with developers to identify root causes.

WHY I AM INTERESTED IN A QA ENGINEER ROLE AT PHONELY

I'm interested in bringing my QA and automation experience with Python, Playwright, Selenium, Pytest, and CI/CD to a product-focused team. I am also excited about the opportunity to learn new AI-driven testing approaches, and apply my QA automation experience to help ensure reliable, high-quality AI products.
